Connectivity

Connect to the fastest and most robust network in Latin America with access to local content and high-quality service.

Connectivity

EdgeUno's connectivity infrastructure is a leader in Latin America, providing optimal access to streaming content, video games and real-time applications with the lowest latency over the most diverse and available network in Latin America.

edgeuno

Features

Redundant network topology with no single points of failure connected to the main submarine cables.

P2P Wave and EPL connection with flexible bandwidths between more than 20+ cities throughout the Americas.

**Connection to the most extensive regional** network of local content in Latin America.

Connection to the most important Exchange Points (IXs) in Latin America and the world.

Presence in the main Datacenters in the region, guaranteeing different service delivery points.

Access to customer portal to manage contracted services, view traffic graphs, create and track tickets and review billing.

Full in-country coverage through **national transportation** and **last mile services.**

Support of IP connectivity in Burstable mode, with the possibility of delivery on **10/40/100Gbp ports.**
